

# Intro to T<sub>E</sub>X and L<sup>A</sup>T<sub>E</sub>X

The Programming Language for Creating Beautiful Documents

John McAvoy

A-Team Workshop

February 8, 2019

# What is T<sub>E</sub>X and L<sup>A</sup>T<sub>E</sub>X?

- **T<sub>E</sub>X** (= tau epsilon chi, and pronounced similar to "blecch", not to the state known for 'Tex-Mex' chili) is a computer language designed by Donald Knuth for use in typesetting; in particular, for typesetting math and other technical (from Greek "techne" = art/craft, the stem of 'technology') material. It takes a "plain" text file and converts it into a high-quality document for printing or on-screen viewing.[1] [2]
- **L<sup>A</sup>T<sub>E</sub>X** is a macro system built on top of TeX that aims to simplify its use and automate many common formatting tasks. It is the de-facto standard for academic journals and books, and provides some of the best typography free software has to offer. [2]

# What is T<sub>E</sub>X/L<sup>A</sup>T<sub>E</sub>X Used For?

- **Making Documents With Complex Formats**
- **Technical Papers**
  - Research Papers
  - IEEE Documents
- **Literally And Written Medium**
  - Essays
  - Novels
  - Journal Articles
  - Lab Reports
  - Memos
  - Slideshows?
  - And so much more!

# What Does T<sub>E</sub>X Look Like?

- IEEETran (the L<sup>A</sup>T<sub>E</sub>X format guide that all articles published by IEEE must use)
- Internet of Things for Smart Cities
- Lab Report Example
- Lab Repo../rt Example With Code Snippets
- Resume Example
- Documentation Example
- User Manual Example
- Code Documentation
- Tons of More Template to Get You Started

# $\text{\LaTeX}$ vs Word

Figure: Effort and Time Comparison: Word vs  $\text{\LaTeX}$  [3]

# How to Start Writing T<sub>E</sub>X Documents

- **Option I: Use Overleaf**

- 1 Make a free, personal overleaf account
- 2 Make your first T<sub>E</sub>X project
- 3 That's basically it, you can start writing T<sub>E</sub>X

- **Option II: Write T<sub>E</sub>X Documents Locally**

- 1 **Download a T<sub>E</sub>X Language Compiler and a TeX Package Manager**

- Windows: proTeXt
- MacOS: MacTeX
- Unix/GNU/Linux: TeX Live

- 2 Configure your favorite text editor or IDE to support T<sub>E</sub>X syntax highlighting, a T<sub>E</sub>X IDE may already be included in MacTeX and TeX Live)
- 3 Compile your T<sub>E</sub>X and that's it.

# Pros and Cons

- **Option 1: Use Overleaf**

- **Pros:**

- ① It's the fastest way to learn how to make documents in a  $\text{T}_{\text{E}}\text{X}$  environment
- ② Overleaf has all of the  $\text{T}_{\text{E}}\text{X}$  packages you will ever need so you don't have to bother with installing packages
- ③ You get access to a plethora of pre-made templates
- ④ It's essentially Google Docs for  $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ , you can collaborate with friends on reports
- ⑤ Overleaf has live rendering of your document so you can see what your document looks like as you write  $\text{T}_{\text{E}}\text{X}$  code
- ⑥ Overleaf has error checking and basic debugging that is decent

- **Cons:**

- ① It's a cloud-based service so you have to have an internet connection
- ② You have to upload files that you reference in your  $\text{T}_{\text{E}}\text{X}$ , (e.g. images, code snippets)
- ③ Some features like collaboration cost a monthly fee

# Pros and Cons

- **Option II: Write T<sub>E</sub>X Documents Locally**

- **Pros:**

- ① You can write T<sub>E</sub>X anywhere, no internet required
- ② You can use your favorite text editor
- ③ The fastest way to write T<sub>E</sub>X documents
- ④ There are many T<sub>E</sub>X IDE's that usually bundle a T<sub>E</sub>X compiler, a T<sub>E</sub>X package manager, and a text editor
- ⑤ You can reference local files (e.g. images, code) and when you change them, you just have to recompile and all changes are updated in you document
- ⑥ 100% free

- **Cons:**

- ① Need to download stuff
- ② Have to install T<sub>E</sub>X packages yourself
- ③ Requires a little bit of configuration at first

# Where to Get Started

- **Overleaf's  $\text{\LaTeX}$  Tutorials** are excellent
- All of the  $\text{\TeX}$  source to make this presentation, as well as some  $\text{\TeX}$  documents I've created can be found on **GitHub**
